## THE MAKING OF HAWKINS PRESSURE COOKERS

Hawkins Cookers Limited has been in business since 1959. Today, it has two offices, three factories and about 700 persons working. It is the leader in the pressure cooker market in India and has exported its products since 1974 to various countries in each of the six continents of the world.

Worldwide, Hawkins has sold over 100 million units of pressure cookers and cookware by producing products of good design, good quality and considerable consumer benefit. Hawkins pressure cookers are listed by Underwriters Laboratories, USA, an independent worldwide institution testing products for public safety. From February 1, 2021, the Government of India has made it mandatory to list all Pressure Cookers manufactured and sold in India with the Bureau of Indian Standards, commonly known as ISI. All Pressure Cookers manufactured by us thereafter carry the ISI mark.

Each pressure cooker made by Hawkins features an inside-fitting lid. This design is inherently safer than conventional pressure cookers. To open any Hawkins cooker, you have to first lower the lid slightly into the body of the cooker; and that cannot be done until the steam pressure inside the cooker falls to a safe level. Thus Hawkins pressure cookers are pressure-locked for safety – like a jetliner door!

The Hawkins Company is well known for not compromising on quality and for continual product innovation. The most thorough research and development, the most careful selection of materials, the best manufacturing practices and the strictest quality control – all go into making pressure cookers which are trusted by the millions of families using them.

Each cooker is tested to be leak-proof. Along with a superior pressure regulating system, this ensures that Hawkins cooks quickest.

Each pressure cooker comes individually packed in an attractive full-colour carton. Cookbooks/Instruction Manuals come free with each pressure cooker.

Additionally, the individual cartons are packed in master cartons/case packs from 2 to 12 units (depending upon the size of the product). This makes your receiving of shipments more convenient and secure.

All Hawkins pressure cookers are guaranteed for five years.

### HAWKINS CLASSIC PRESSURE COOKER

The Classic is Hawkins' largest-selling, most popular range of pressure cookers – perhaps because of its attractive combination of features, benefits and price. Each Hawkins Classic features an inside-fitting lid. This design is inherently safer than conventional cookers. Thus Hawkins Classic pressure cookers are pressure-locked for safety – like a jetliner door!

This range was the first to be introduced by Hawkins and has been kept fresh and current by numerous innovations and improvements over the years. The latest improvement is a superior pressure regulating system that controls pressure to a narrower, more efficient range, reduces sprouting of frothy foods (such as *dal*) and is easier to insert and remove.

The safety valve is located under the lid handle bar so that when it operates the steam is safely deflected downwards. The gasket has minimum exposure to steam inside the cooker, does not rub every time the product is opened and closed – so lasts longer.

Stay-cool handles. Fixed sturdy pivot does not put pressure on the plastic handles as it is a part of the metal handle itself. Thus handles last longer. Recommended for use on gas stoves.

## What is Hard Anodising?

Hard Anodising was first developed by Russian scientists to produce a metal surface tough enough for space travel. The same technology is now used to make the most advanced Pressure Cooker. Through a process of electrolysis at sub-zero temperature using a high intensity electric current, a 60 micron thick layer of aluminium oxide ( $Al_2O_3$ ) is formed molecule by molecule as an integral part of pure, virgin aluminium. This process is called Hard Anodising. It produces a tough surface with wonderful properties for cooking.

- Thermal-efficient: heats fast and evenly
- Not spoilt by high heat
- 2.4 times harder than steel
- Non-toxic, non-staining, non-reactive with foods
- Will not pit, tarnish or corrode
- Stays looking new for years

# Hawkins® BIGBOY™

## HAWKINS BIGBOY PRESSURE COOKER

The Bigboy range has been specially designed to cook large quantities of food quickly and economically. It is most useful in restaurants, hotels, canteens in factories, hospitals, schools and colleges. Also, canteens in many civil or military government establishments are using the Hawkins Bigboy.

The 18 Litre and 22 Litre Bigboy Pressure Cookers have a pair of sturdy lifting handles attached to the sides of the pressure cooker for convenience in handling the heavy weight carried by such pressure cookers. The plastic handles of all Bigboy Pressure Cookers are made from reinforced fibreglass for extra strength. Similarly, all other components of Bigboy Pressure Cookers are made for heavy duty. A chain is attached to the vent weight to prevent loss in busy kitchens.

Recommended for use on gas or kerosene stoves. They may also be used on coal burning or firewood stoves provided a suitable gap of at least 1 inch is kept between the fuel and the bottom of the cooker.
